Industrial Engineering

Indices, 1985
Volume 17

Microfilm copies of articles are available from University Microfilms International, 300 North Zeeb Road, Ann Arbor, MI 48106. Paper copies can also be obtained from the Publication Order Department, IIE, 25 Technology Park, Norcross, GA 30092, Phone 404/449-0460, for $4.00 each, prepaid.

Subjects (coded) and titles

0100 Costs

0103 Cost estimating

Factors Identified For Use In Comparing Conventional & Flexible Manufacturing Systems; Randhawa, S. U., Bedworth, D.; June; p. 40.

0104 Cost reduction programs

Computerized Work Measurement Can Help Hospitals Identify Cost Reduction Possibilities; Lindner, C., Hancock, W. M.; March; p. 70.

Health Care Costs Take Spotlight As Technological Advances Collide With Issues and Practicalities; Filley, R. D.; March; p. 34.

IEs Urged To Examine Impact On Hospital Management Of New Case-Payment System Under Medicare; Desai, H. B., Margenthaler, C. R., Dunlap, E. D.; March; p. 58.

Making Ergonomics Pay: Adopting A Business Approach; Alexander, D. C.; July; p. 32.

0105 Productivity

A Different View of The Grace Commission's Recommendations; Andolsek, L. J.; November; p. 18.

American Industrial Policy: Current Effects and Proposed Direction; Briskin, L.; January; p. 62.

Flexible Material Management Systems Help Companies Optimize Resources Instead of Replacing Them; Schuk, C. C.; November; p. 49.

IEs Evaluate Productivity Improvement Efforts In Own Organizations and Across U.S.; Camp, L. G.; January; p. 80.

IEs Face Challenges In Managing Human Resources To Improve Declining Productivity; Miller, R. W.; January; p. 72.

New Approaches To Improve White Collar Productivity; Ford, R. J.; August; p. 48.

Strategic Planning: A Crucial Step Toward A Successful Productivity Management Program; Sink, D. S.; January; p. 52.

2,500 IEs Work For Worldwide Philips. A Leader In Quality And Technology; Filley, R. D.; October; p. 96.

0200 Employee relations

Objectives Setting Is Efficient Tool For R & D Annual Planning; Batson, R. G., Miller, D. M.; August; p. 36.

0203 Implementing change

Can IEs Become Masters Of Change?; Sink, D. S.; December; p. 76.

Industrial Engineering—A Look At The Future; Putnam, A. O.; December; p. 18.

0204 Job description

IE Leaders Give Views On Where Their Profession Is Headed; Filley, R. D.; December/p. 34.

0205 Job evaluation

Changes In Workforce Quantity Require New Job Placements; Valk, R. A.; October; p. 22.

0300 Engineering economics

0301 Cash flow analysis

Selecting Order Quantities For A Group Of Items During A Special Purchasing; Kiran, A. S.; November; p. 22.

0303 Investment analysis

Proposed Tax Law Changes Have Short- and Long-Term Investment Implications; Canada, J. R., Oldham, C.; April; p. 84.

Suggested Techniques Enable Multi-Criteria Evaluation Of Material Handling Alternatives; Frazelle, E.; February; p. 42.

0304 General

Human Factors, Computer System Are Key Elements In Inventory Management Program; Crandall, R. E.; October; p. 64.

Ten-Step Guide Provides An Orderly Procedure For Solving Packaging Problems; Hixson, R. W.; February; p. 86.

0400 Facilities planning, design

How To Take A Systems Approach To Facilities Management; Colacino, M.D.,; May; p. 64.

Three Emerging Computer Technologies Boost Value Of, Respect For Facilities Function; Filley, R. D.; May; p. 27.

Time Has Come For Long-Range Planning Of Facilities Strategies In Electronics Industries; Hales, H. L.; April; p. 28.

0402 Facility location

Developing A Framework For Location Analysis, Part 1 of 2; Bruce, J. M.; May; p. 52.

Investigating Possible Areas And Choosing The Best Location, Part 2 of 2; Bruce, Jr., J. M.; June; p. 60.

0403 Office layout

Computerized Facilities Planning, Design And Management Options For Today's Offices; Brennan, B. M.; May; p. 70.

Work Station Of The Future For Knowledge workers; Shell, R. L., Okogbaa, O. G., Huston, T. R.; August, p. 54.

0405 Plant layout analysis

A Step Beyond Computer-Aided Layout; McCormick, M. J., Wrennall, W.; May; p. 40.

0500 Functional operations

0501 Assembly

A Systems Approach To Ergonomically Sound Design Of Electronics Assembly/Test stations; Pukanic, R., Morelli, D. L.; July; p. 44.

Flexible Work Stations Offer Improved, Cost-Effective Alternative For Factory; Brown, E.; June; p. 50.

0503 Computer Operation, software

Changes In Workforce Quantity Require New Job Placements; Valk, R. A.; October; p. 22.

Characteristics Of Software Programs Help IEs Determine Best One For Needs; Rummel-Holland, P. A., Holland, T. E.; July; p. 52.

Computer Solution To Single Machine Sequencing Problem; Abou-Zeid, M. R., El-Bouri, A. W., Garg, U. K.; August; p. 26.

0019-8234/85$03.00/0

0019-8234/85$03.00/0

Decision Support Systems Aid In Management Of Operations, Resources And Finances, Part 1 of 2; Leary, E. J.; September; p. 26.
Decision Support Systems: A Look At Hardware, Software and Planning Procedures, Part 2 of 2; Leary, E. J.; October; p. 82.
Electronic Spreadsheets Evaluated For IE Applications, Part 1 of 2; Morse, L., Whitehouse, G. E.; February; p. 17.
IEs Must Look At Equipment, Needs In Choosing Spreadsheets; Morse, L., Whitehouse, G. E.; March; p. 21.
Microcomputer Application For Constrained Nonlinear Optimization Program; Ong, S. L.; July; p. 24.
Newest Manufacturing Software Packages Offer Modules Which Meet Specialized Needs; Sepehri, M.; October; p. 28.
Portable Microcomputers Function As Data Controllers; MacMillan, J. S., Walker, A. P.; January; p. 18.
Program Performs Test For Quality In Production Process; Lorenz, N., Whitehouse, G. E.; April; p. 22.
Simulation Model Calculates How Many Automated Guided Vehicles Are Needed; Newton, D.; February; p. 68.
Spreadsheet Programs Enable Quick Custom Analyses Of Material Handling Problems; Rickles, H. V., Elliott, K. A.; February; p. 80.
System Combines Manufacturing Resource Planning and Decision Support Approach; Chong, P. S.; October; p. 72.
Time Cost Trade-Offs In Deterministic Activity Network Aid Project Decision-Making; Pulat, P. S.; May; p. 20.
Understanding Differences Helps Translate Programs Between Different Brands Of Computers; Mundel, M.E., Danner, D. L.; December; p. 24.
Using A Relational Database In Industrial Engineering Projects; Leigh, W., Souder, H. R., Shell, R. L.; June; p. 24.

0504 Maintenance, plant engineering
Recommendations For Maintenance Of Robots, Part 2 of 2; Lester, W. A., Lannon, Jr., R. P., Bellandi, R.; February; p. 30.
Robot Users Need to Have Program for Maintenance, Part 1 of 2; Lester, W. A., Lannon, Jr., R. P., Bellandi, R.; January; p. 28.

0505 Purchasing
Selecting Order Quantities For A Group Of Items During A Special Purchasing; Kiran, A. S.; November; p. 22.

0600 Human engineering

0601 Behavioral science
Companies Need To Establish Climate That Fosters Innovation; Greenwald, R.; April; p. 10.
Is Top Management Really Committed To Innovation?; Pereira, C. L.; June; p. 12.
Managing People Effectively: How To Get The Best Performance From Employees; Chaneski, W. S.; August; p. 30.

0603 Ergonomics
A Systems Approach To Ergonomically Sound Design Of Electronics Assembly/Test Stations; Pukanic, R., Morelli, D. L.; July; p. 44.
Characteristics Of Software Programs Help IEs Determine Best One For Needs; Rummel-Holland, P. A., Holland, T. E.; July; p. 52.
Ergonomic Changes In Work Place Can Improve The Productivity Of Production Operations; Priest, J. W.; July; p. 40.
Flexible Work Stations Offer Improved, Cost-Effective Alternative For Factory; Brown, E.; June; p. 50.
Making Ergonomics Pay: Adopting A Business Approach; Alexander, D. C.; July; p. 32.
Videosomatography: A Method For Designing Work Places; Bauer, W., Lorenz, D.; July; p. 60.
Work Station Of The Future For Knowledge Workers; Shell, R. L., Okogbaa, O. G., Huston, T. R.; August; p. 54.

0605 Motivation
How Kanban System Is Used In An American Toyota Motor Facility; Sepehri, M.; February; p. 50.

0606 Personnel scheduling
Changes In Workforce Quantity Require New Job Placements; Valk, R. A.; October; p. 22.

0610 Sociological factors
Managing Change From The Middle; Settles, S., Mize, J.; September; p. 14.
Strengthening The Role Of Industrial Engineering In Education And Society; White, J. A.; December; p. 46.

0700 Incentive plans

0705 General
New Approaches To Improve White Collar Productivity; Ford, R. J.; August; p. 48.

0800 Industrial engineering

0801 AIIE
Annual Awards 1985; June; p. 86.
Annual IIE Conference Attendees Focus On Productivity, Quality And Excellence; Filley, R. D., July; p. 28.
IE Leaders Give Views On Where Their Profession Is Headed; Filley, R. D.; December; p. 34.
*Institute of Industrial Engineers, 1985-86 Board of Trustees; June; p. 80.*Report To The Membership; July; p. 78.

0804 Education
Strengthening The Role Of Industrial Engineering In Education And Society; White, J. A.; December; p. 46.

0805 IE's, IE technologists
Can IEs Become Masters Of Change?; Sink, D. S.; December; p. 76.
Defining The Role Of The Industrial Engineer In Integrating New Technologies; Pritsker, A. A. B.; December; p. 60.
Health Care Costs Take Spotlight as Technological Advances Collide With Issues and Practicalities; Filley, R. D.; March; p. 34.
IE Income Update: 1985 Compensation Survey Results; Langer, S.; August; p. 78.
IE Leaders Give Views On Where Their Profession Is Headed; Filley, R. D.; December; p. 34.
IEs Evaluate Productivity Improvement Efforts In Own Organizations and Across U.S.; Camp, L. G.; January; p. 80.
IEs Must Be Key Players In Manufacturing Strategy To Combat Global Competition; Sessions, R. E.; December; p. 68.
Industrial Engineering—A Look At The Future; Putnam, A. O.; December; p. 18.
Manufacturing Offers Changes And Challenges For The Future Which Will Impact IEs; Ward, R., Cullinane, T., Blache, K.; December; p. 86.
Professional Registration Protects Public, Provides Career Advantages, Part 1 of 2; Kennedy, Jr., W. J.; April; p. 88.
Professional Registration Test Examined For Content, Scoring System, Part 2 of 2; Kennedy, Jr., W. J.; May; p. 95.
Projecting Present Trends Won't Give Accurate View

of IE's Role in Manufacturing; Settles, F. S.; December; p. 54.

Strengthening The Role Of Industrial Engineering In Education And Society; White, J. A.; December; p. 46.

2,500 IEs Work For Worldwide Philips, A Leader In Quality And Technology; Filley, R. D.; October; p. 96.

0806 IE management

Coping With 'Organizational Predicaments': A Structured Intuitive Approach; Balk, W.; August; p. 64.

IE Managers Discuss Strategic Approaches To Technological And Competitive Challenges; Kii, S.; May; p. 98.

IEs Face Challenges In Managing Human Resources To Improve Declining Productivity; Miller, R. W.; January; p. 72.

0900 Industries

0902 Government

A Different View Of The Grace Commission's Recommendations; Andolsek, L. J.; November; p. 18.

American Industrial Policy: Current Effects and Proposed Direction; Briskin, L.; January; p. 62.

Stemming The Federal Deficit; Shumway, F. N.; August; p. 12.

0903 Health care and other services

AMA Officer Looks At Issues In, Future Of Health Care Industry; Cudworth, E. F., King, L.; March; p. 46.

Computerized Work Measurement Can help Hospitals Identify Cost Reduction Possibilities; Lindner, C., Hancock, W. M.; March; p. 70.

Health Care Costs Take Spotlight As Technological Advances Collide With Issues and Practicalities; Filley, R. D.; March; p. 34.

IEs Have Opportunity to Implement Fundamental Changes With Computers In Hospital Management; Napoli, J. G.; March; p. 64.

IEs Urged To Examine Impact On Hospital Management Of New Case-Payment System Under Medicare; Desai, H. B., Margenthaler, C. R., Dunlap, E. D.; March; p. 58.

0904 Manufacturing

A Machine Builds Machines At Apple Computer's Highly Automated Macintosh Manufacturing Facility; Sepehri, M.; April; p. 60.

Automatic Indentification Systems Serve As Integrators In The Factory of The Future; Narasimhan, S. L., Koza, R. C.; February; p. 58.

Automation Needs Prompt Different Approaches For Systems Analysis; Emerson, B.; June; p. 28.

CIMS Methodology Is Applied To CAD/CAM Integration In Factory Of Future, CIMS Series, Part 21; Sarlin, R. A.; September; p. 58.

Computer Solution To Single Machine Sequencing Problem; Abou-Zeid, M. R., El-Bouri, A. W., Garg, U.K.; August; p. 26.

Computer-Aided Shop Floor Control: How One Manufacturer Achieved It Affordably; Ward, R. J., Ward, R. E.; June; p. 46.

Conceptual Model Aids In Development of Manufacturing System For PC Assembly Shop; McKenna, A.; April; p. 54.

Ergonomic Changes In Work Place Can Improve The Productivity Of Production Operations; Priest, J. W.; July; p. 40.

Expert Systems Can Lay Groundwork For Intelligent CIM Decision Making, CIMS Series, Part 15; Fisher, E. L.; March; p. 78.

Factors Identified For Use In Comparing Conventional & Flexible Manufacturing Systems; Randhawa, S. U., Bedworth, D.; June; p. 40.

Flexibility And Integration Are Key material Handling Concepts In Electronic Assembly Environment; Pukanic, R.; April; p. 40.

Flexible Manufacturing System Is CIM Implemented At The Shop Floor Level, CIMS Series, Part 18; Saul, G.; June; p. 34.

Formation And Workings Of A Corporate-Wide CIM Committee At Garrett Corporation, CIMS Series, Part 22; Mize, J. H., Seifert, D. J., Settles, F. S.; November; p. 75.

From Primitive to High Tech In Five Years: A Case Study In Printer Manufacturing; Herd, J. L.; April; p. 44.

Group Technology Provides Organized Approach To Realizing Benefits Of CIMS, CIMS Series, Part 16; Shunk, D. L.; April; p. 74.

How Kanban System Is Used In An American Toyota Motor Facility; Sepehri, M.; February; p. 50.

Manufacturing Control System At IBM Tracks Product Movement Through Semiconductor Line; Minnich, H. W., Bula, H.; November; p. 82.

Manufacturing Offers Changes And Challenges For The Future Which Will Impact IEs; Ward, R., Cullinane, T., Blache, K.; December; p. 86.

Material Handling Equipment Alternatives Examined for Progressive Build In Light Assembly Operations; Orr, G. B., Sopher, S. M., Apple, Jr., J. M.; April; p. 68.

Material Handling Requirements Are Altered Dramatically By CIM Information Links, CIMS Series, Part 14; White, J. A., Apple, J. M.; February; p. 36.

Modeling & Simulation Provide Key To CIM Implementation Philosophy, CIMS Series, Part 17; Glenney, N. E., Mackulak, G. T.; May; p. 76.

Models, Myths And Mysteries In Manufacturing, CIMS Series, Part 19; Feltner, C. E., Weiner, S. A.; July; p. 66.

Newest Manufacturing Software Packages Offer Modules Which Meet Specialized Needs; Sepehri, M.; October; p. 28.

Physical Simulator Analyzes Performance Of Flexible Manufacturing System; Diesch, K. H., Malstrom, E. M.; June; p. 66.

Program Offers Real-Time Multi-Stage Cost-Quality Control On Production; Sepehri, M.; September; p. 22.

Program Performs Test For Quality In Production Process; Lorenz, N., Whitehouse, G. E.; April; p. 22.

Projecting Present Trends Won't Give Accurate View of IE's Role in Manufacturing; Settles, F. S.; December; p. 54.

Roundtable Participants Talk About CIM Myths and Realities, People Aspects and the Future, CIMS Series, Part 13; Filley, R. D.; January; p. 34.

Successful MRP II Implementation Can Be Completed By Smart Scheduling, Sequencing Systems; Kamenetzky, R. D.; October; p. 44.

Time Has Come For Long-Range Planning Of Facilities Strategies In Electronics Industries; Hales, H. L.; April; p. 28.

Using A Robot To Coat Honeycomb Cores For Aircraft—Case Study; Saifudin, K.; November; p. 94.

2,500 IEs Work For Worldwide Philips, A Leader In Quality And Technology; Filley, R. D.; October; p. 96.

0905 Transportation, distribution

Computer-Generated System Aids Airline's Passenger Flow and Routing Of Aircraft; Riccio, L. A., Ron, N.; September; p. 52.

Human Factors, Computer System Are Key Elements

In Inventory Management Program; Crandall, R. E.; October; p. 64.

0906 Others

Resource Requirement Planning Achieves Production Goals For Non-Profit Organization; Jarkon, J. G., Nanda, R.; October; p. 54.

1000 Management

A Champion For Automation; Meredith, J.; May; p. 25.

AMA Officer Looks At Issues In, Future Of Health Care Industry; Cudworth, E. F., King, L.; March; p. 46.

Stemming The Federal Deficit; Shumway, F. N.; August; p. 12.

3M's Commitment To Quality As A Way Of Life; Cudworth, E. F.; July; p. 16.

1001 Administration

IEs Urged To Examine Impact On Hospital Management Of New Case-Payment System Under Medicare; Desai, H. B., Margenthaler, C. R., Dunlap, E. D.; March; p. 58.

Managing People Effectively: How To Get The Best Performance From Employees; Chaneski, W. S.; August; p. 30.

Objectives Setting Is Efficient Tool For R & D Annual Planning; Batson, R., Miller, D.; August; p. 36.

1002 Communications

Developing A Framework For Location Analysis, Part 1 of 2; Bruce, Jr., J. M.; May; p. 52.

Investigating Possible Areas And Choosing The Best Location, Part 2 of 2; Bruce,Jr., J. M.; June; p. 60.

1003 Decision making

Can IEs Become Masters Of Change?; Sink, D. S.; December; p. 76.

Coping With 'Organizational Predicaments': A Structured Intuitive Approach; Balk, W.; August; p. 64.

Decision Support System Used For Robot Selection; Jones, M. S., Malmborg, C. J., Agee, M. H.; September; p. 66.

Decision Support Systems Aid In Management Of Operations, Resources And Finances, Part 1 of 2; Leary, E. J.; September; p. 26.

Decision Support Systems: A Look At Hardware, Software and Planning Procedures, Part 2 of 2; Leary, E. J.; October; p. 82.

Expert Systems Can Lay Grondwork For Intelligent CIM Decision Making, CIMS Series, Part 15; Fisher, E. L.; March; p. 78.

IEs Must Be Key Players In Manufacturing Strategy To Combat Global Competition; Sessions, R. E.; December; p. 68.

Microcomputer-Based Decision Support Systems Aid Managers In Evaluating Alternatives; Economides, S., Colen, M.; September; p. 44.

Policy And Procedure Program Is A Support System For Executive Decision Making; Elson, II, J. L.; September; p. 36.

Projecting Present Trends Won't Give Accurate View of IE's Role in Manufacturing; Settles, F. S.; December; p. 54.

System Combines Manufacturing Resource Planning and Decision Support Approach; Chong, P. S.; October; p. 72.

Time Has Come For Long-Range Planning Of Facilities Strategies In Electronics Industries; Hales, H. L.; April; p. 28.

1004 Information systems

Boeing's Executive Information Network; Filley, R. D.; September; p. 38.

Electronic Spreadsheets Evaluated For IE Applications, Part 1 of 2; Morse, L., Whitehouse, G. E.; February; p. 17.

How To Take A Systems Approach To Facilities Management; Colacino, M. D.; May; p. 64.

IEs Have Opportunity to Implement Fundamental Changes With Computers In Hospital Management; Napoli, J. G.; March; p. 64.

IEs Must Look At Equipment, Needs In Choosing Spreadsheets; Morse, L., Whitehouse, G.E.; March; p. 21.

Resource Requirement Planning Achieves Production Goals For Non-Profit Organization; Jarkon, J. G., Nanda, R.; October; p. 54.

Roundtable Participants Talk About CIM Myths and Realities, People Aspects and the Future, CIMS Series, Part 13; Filley, R. D.; January; p. 34.

Three Emerging Computer Technologies Boost Value Of, Respect For Facilities Function; Filley, R. D.; May; p. 27.

1005 Management development

Companies Need To Establish Climate That Fosters Innovation; Greenwald, R.; April; p. 10.

Is Top Management Really Committed To Innovation?; Pereira, C. L.; June; p. 12.

Managing Change From The Middle; Settles, S., Mize, J.; September; p. 14.

Managing Your Company's Growth Stages From Infancy To Adolescence To Maturity; Greenwald, R.; October; p. 13.

New Approaches To Improve White Collar Productivity; Ford, R. J.; August; p. 48.

1006 Organization

Formation And Workings Of A Corporate-Wide CIM Committee At Garrett Corporation, CIMS Series, Part 22; Mize, J. H., Seifert, D. J., Settles, F. S.; November; p. 75.

IEs Face Challenges In Managing Human Resources To Improve Declining Productivity; Miller, R. W.; January; p. 72.

Strategic Planning: A Crucial Step Toward A Successful Productivity Management Program; Sink, D. S.; January; p. 52.

1007 Project management

Time Cost Trade-Offs In Deterministic Activity Network Aid Project Decision-Making; Pulat, P. S.; May; p. 20.

1100 Material Handling

1105 Dispatching, Scheduling

Simulation Model Calculates How Many Automated Guided Vehicles Are Needed; Newton, D.; February; p. 68.

1107 Methods and systems design

A Machine Builds Machines At Apple Computer's Highly Automated Macintosh Manufacturing Facility; Sepehri, M.; April; p. 60.

Flexible Material Management Systems Help Companies Optimize Resources Instead of Replacing Them; Schuk, C. C.; November; p. 49.

Flexibility and Integration Are Key Material Handling Concepts In Electronic Assembly Environment; Pukanic, R.; April; p. 40.

Material Handling Requirements Are Altered Dramatically By CIM Information Links, CIMS Series, Part 14; White, J. A., Apple, J. M.; February; p. 36.

1108 Packaging

Ten-Step Guide Provides An Orderly Procedure For Solving Packaging Problems; Hixson, R. W.; February; p. 86.

1109 Principles, analysis

Material Handling Equipment Alternatives Examined For Progressive Build In Light Assembly Operations; Orr, G. B., Sopher, S. M., Apple, Jr., J. M.;

April; p. 68.
Suggested Techniques Enable Multi-Criteria Evaluation Of Material Handling Alternatives; Frazelle, E.; February; p. 42.

1112 Evaluation and Selection

Bar Code Equipment Buyer's Guide—1985; Filley, R. D.; November; p. 33.
Spreadsheet Programs Enable Quick Custom Analyses Of Material Handling Problems; Rickles, H. V., Elliott, K. A.; February; p. 80.

1200 Methods Engineering

1201 Automation, mechanization

A Champion For Automation; Meredith, J.; May; p. 25.
Automation Needs Prompt Different Approaches For Systems Analysis; Emerson, B.; June; p. 28.
CIMS Methodology Is Applied To CAD/CAM Integration In Factory Of Future, CIMS Series, Part 21; Sarlin, R. A.; September; p. 58.
Decision Support System Used For Robot Selection; Jones, M. S., Malmborg, C. J., Agee, M. H.; September; p. 66.
Defining The Role Of The Industrial Engineer In Integrating New Technologies; Pritsker, A. A. B.; December; p. 60.
Formation And Workings Of A Corporate-Wide CIM Committee At Garrett Corporation, CIMS Series, Part 22; Mize, J. H., Seifert, D. J., Settles, F. S.; November; p. 75.
Manufacturing Offers Changes And Challenges For The Future Which Will Impact IEs; Ward, R., Cullinane, T., Blache, K.; December; p. 86.
Modeling & Simulation Provide Key To CIM Implementation Philosophy, CIMS Series, Part 17; Glenney, N. E., Mackulak, G. T.; May; p. 76.
Recommendations For Maintenance Of Robots, Part 2 of 2; Lester, W. A., Lannon, Jr., R. P., Bellandi, R.; February; p. 30.
Robot Users Need to Have Program for Maintenance, Part 1 of 2; Lester, W. A., Lannon, Jr., R. P., Bellandi, R.; January; p. 28.
Using A Robot To Coat Honeycomb Cores For Aircraft—Case Study; Saifudin, K.; November; p. 94.

1202 Computer control

A Machine Builds Machines At Apple Computer's Highly Automated Macintosh Manufacturing Facility; Sepehri, M.; April; p. 60.
Computer-Aided Shop Floor Control: How One Manufacturer Achieved It Affordably; Ward, R. J., Ward, R. E.; June; p. 46.
IEs Have Opportunity to Implement Fundamental Changes With Computers In Hospital Management; Napoli, J. G.; March; p. 64.
Physical Simulator Analyzes Performance Of Flexible Manufacturing System; Diesch, K. H., Malstrom, E. M.; June; p. 66.
Roundtable Participants Talk About CIM Myths and Realities, People Aspects and the Future, CIMS Series, Part 13; Filley, R. D.; January; p. 34.

1204 Identification systems

Automatic Identification Systems: Strengths, Weaknesses and Future Trends; Soltis, D.; November; p. 54.
Automatic Indentification Systems Serve As Integrators In The Factory of The Future; Narasimhan, S. L., Koza, R. C.; February; p. 58.
Bar Code Equipment Buyer's Guide—1985; Filley, R. D.; November; p. 33.
Bar Code Systems Enhance Productivity of Computer Systems With Real-Time Mode; McDonald, R. A.; November; p. 70.
Manufacturing Control System At IBM Tracks Product Movement Through Semiconductor Line; Minnich, H. W., Bula, H.; November; p. 82.
Radio Frequency Control Link: A Mobile, Real Time Data Collection Technology; Scaringe, R. A.; November; p. 62.

1208 Principles, analysis

A Systems Approach To Ergonomically Sound Design Of Electronics Assembly/Test Stations; Pukanic, R., Morelli, D. L.; July; p. 44.
Conceptual Model Aids In Development of Manufacturing System For PC Assembly Shop; McKenna, A.; April; p. 54.
Factors Identified For Use In Comparing Conventional & Flexible Manufacturing Systems; Randhawa, S. U., Bedworth, D.; June; p. 40.
Flexible Manufacturing System Is CIM Implemented At The Shop Floor Level, CIMS Series, Part 18; Saul, G.; June; p. 34.
Group Technology Provides Organized Approach To Realizing Benefits Of CIMS, CIMS Series, Part 16; Shunk, D. L.; April; p. 74.
Videosomatography: A Method For Designing Work Places; Bauer, W., Lorenz, D.; July; p. 60.

1209 Process design

Computer-Aided Process Planning Is Link Between CAD and CAM, CIMS Series, Part 20; Wolfe, P. M.; August; p. 72.
Resource Requirement Planning Achieves Production Goals For Non-Profit Organization; Jarkon, J. G., Nanda, R.; October; p. 54.

1213 Work design, methods improvement

Work Station Of The Future For Knowledge Workers; Shell, R. L., Okogbaa, O. G., Huston, T. R.; August; p. 54.

1300 Quantitative methods

1302 Networks

Time Cost Trade-Offs In Deterministic Activity Network Aid Project Decision-Making; Pulat, P. S.; May; p. 20.

1303 Programming: linear, nonlinear

Microcomputer Application For Constrained Nonlinear Optimization program; Ong, S. L.; July; p. 24.

1305 Simulation/games

Modeling & Simulation Provide Key To CIM Implementation Philosophy, CIMS Series, Part 17; Glenney, N. E., Macklak, G. T.; May; p. 76.
Models, Myths And Mysteries In Manufacturing, CIMS Series, Part 19; Feltner, C. E., Weiner, S. A.; July; p. 66.
Physical Simulator Analyzes Performance Of Flexible Manufacturing System; Diesch, K. H., Malstrom, E. M.; June; p. 66.
Simulation Model Calculates How Many Automated Guided Vehicles Are Needed; Newton, D.; February; p. 68.

1306 Applied probability

Computer Solution To Single Machine Sequencing *Problem;* Abou-Zeid, M. R., El-Bouri, A. W., Garg, U. K.; August; p. 26.
Computer-Generated System Aids Airline's Passenger Flow and Routing Of Aircraft; Riccio, L. A., Ron, N.; September; p. 52.

1400 Production and inventory control

Newest Manufacturing Software Packages Offer Modules Which Meet Specialized Needs; Sepehri, M.; October; p. 28.
Successful MRP II Implementation Can Be Complemented By Smart Scheduling, Sequencing Systems; Kamenetzky, R. D.; October; p. 44.
System Combines Manufacturing Resource Planning and Decision Support Approach; Chong, P. S.;

October; p. 72.

1401 Distribution systems

Computer-Generated System Aids Airline's Passenger Flow and Routing Of Aircraft; Riccio, L. A., Ron, N.; September; p. 52.

Flexible Material Management Systems Help Companies Optimize Resources Instead of Replacing Them; Schuk, C. C.; November p. 49.

1403 Inventory Control

Human Factors, Computer System Are Key Elements In Inventory Management Program; Crandall, R. E.; October; p. 64.

1404 Materials management

Automatic Identification Systems: Strengths, Weaknesses and Future Trends; Soltis, D.; November; p. 54.

Bar Code Equipment Buyer's Guide—1985; Filley, R. D.; November; p. 33.

Radio Frequency Control Link: A Mobile, Real Time Data Collection Technology; Scaringe, R. A.; November; p. 62.

1405 Production control

Computer-Aided Shop Floor Control: How One Manufacturer Achieved It Affordably; Ward, R. J., Ward, R. E.; June; p. 46.

How Kanban System Is Used In An American Toyota Motor Facility; Sepehri, M.; February; p. 50.

Manufacturing Control System At IBM Tracks Product Movement Through Semiconductor Line; Minnich, H. W., Bula, H.; November; p. 82.

Program Offers Real-Time Multi-Stage Cost-Quality Control On Production; Sepehri, M.; September; p. 22.

1406 Production planning

Computer-Aided Process Planning Is Link Between CAD and CAM, CIMS Series, Part 20; Wolfe, P. M.; August; p. 72.

1500 Quality control

3M's Commitment To Quality As A Way Of Life; Cudworth, E. F.; July; p. 16.

1502 Quality control

Program offers Real-Time Multi-Stage Cost-Quality Control On Production; Sepehri, M.; September; p. 22.

2,500 IEs Work For Worldwide Philips, A Leader In Quality And Technology; Filley, R. D.; October; p. 96.

1504 Sampling

Program Performs Test For Quality In Production *Process;* Lorenz, N., Whitehouse, G. E.; April; p. 22.

1600 Work measurement

1602 Computer aid

Computerized Work Measurement Can help Hospitals Identify Cost Reduction Possibilities; Lindner, C., Hancock, W. M.; March; p. 70.

Portable Microcomputers Function As Data Controllers; MacMillan, J. S., Walker, A. P.; January; p. 18.

1700 Data processing systems design

1703 Analysis techniques

Microcomputer-Based Decision Support Systems Aid Managers In Evaluating Alternatives; Economides, S., Colen, M.; September; p. 44.

1704 Information retrieval

Bar Code Systems Enhance Productivity of Computer Systems With Real-Time Mode; McDonald, R. A.; November; p. 70.

Boeing's Executive Information Network; Filley, R. D.; September; p. 38.

Computer-Aided Process Planning Is Link Between CAD and CAM, CIMS Series, Part 20; Wolfe, P. M.; August; p. 72.

Decision Support Systems Aid In Management Of Operations, Resources And Finances, Part 1 of 2; Leary, E. J.; September; p. 26.

Decision Support Systems: A Look At Hardware, Software and Planning Procedures, Part 2 of 2; Leary, E. J.; October; p. 82.

Expert Systems Can Lay Groundwork For Intelligent CIM Decision Making CIMS Series, Part 15; Fisher, E. L.; March; p. 78.

Policy And Procedure Program Is A Support System For Executive Decision Making; Elson, II, J. L.; September; p. 36.

Radio Frequency Control Link: A Mobile, Real Time Data Collection Technology; Scaringe, R. A.; November; p. 62.

Successful MRP II Implementation Can Be Complemented By Smart Scheduling, Sequencing Systems; Kamenetzky, R. D.; October; p. 44.

1705 General

A Step Beyond Computer-Aided Layout; McCormick, M. J., Wrennall, W.; May; p. 40.

Computerized Facilities Planning, Design And Management Options For Today's Offices; Brennan, B. M.; May; p. 70.

Flexible Manufacturing System Is CIM Implemented At The Shop Floor Level, CIMS Series, Part 18; Saul, G.; June; p. 34.

From Primitive To High Tech In Five Years: A Case Study In Printer Manufacturing; Herd, J. L.; April; p. 44.

How To take A Systems Approach To Facilities Management; Colacino, M. D.; May; p. 64.

Portable Microcomputers Function As Data Controllers; MacMillan, J. S., Walker, A. P.; January; p. 18.

Three Emerging computer Technologies Boost Value Of, Respect For Facilities Function; Filley, R. D.; May; p. 27.

Using A Relational Database In Industrial Engineering Projects; Leigh, W., Souder, H. R., Shell, R. L.; June; p. 24.

Proceedings: 1985 Annual Industrial Engineering Conference

Los Angeles, CA, May 19-23, 1985

Subjects (coded) and titles

0100 Costs

0101 Budgeting

Installing a Comprehensive Manpower Planning and Budgeting System in a Natural Gas Utility; DeFee, R.W.; p. 631.

Statistical Approximations to Resource Allocation/Budgeting by Group Decisions; Chu, J.T., p. 502.

0102 Cost Controls

Development of a Commercial Energy Audit Program for a Public Utility Company; Doering, R.D. and Denning, R.G.; p. 142.

0104 Cost Reduction Programs

A Design for a University Cost Reduction Program; Angelelli, C.L. and Byrd, Jr., J.; p. 259.

Hazardous Waste Management—A Cost Reduction Opportunity?; Webb, R.E., and Turner, W.C.; p. 425.

0105 Productivity

A Computer Aided Productivity Monitoring System; Caudill, H.L.; p. 45.

Improving Productivity of Loan Officers in Large Commercial Banks; Murti, A.K.; p. 27.

Cost Effective Plant Operation Through Incentives; Savage, J.A.; p. 591.

Demonstration of a Statewide Productivity and Quality Enhancement Program; Leonard, M. S., Miller, O.W., David, L.G. and Goldman, J.; p. 265.

Design, Development, and Utilization of Software Support for the Multi-Criteria Performance Measurement and Evaluation Technique; Swim, L.K. and Sink, D.S.; p. 414.

Ergonomics: Human Comfort Engineering; Peterson, K.L.; p. 199.

Industrial Engineering Support Systems—User's Perceptions and Needs; Bedworth, D.D. and Whitehouse, G.E.; p. 107.

MEP . . . Measuring and Managing Clerical Productivity; Bockerstette, J.A.; p. 371.

Multiple Regression Analysis of Binder Line Productivity; Grady, W.E.; p. 275.

Optimization of Productivity Through Mathematical Programming; Mo, D.W.; p. 510.

Performance Action Teams: Update on Continuing Developments; Sink, D.S. and Kiser, K.J.; p. 311.

Productivity Improvement at United States Steel Corporation—Where We've Been, Where We Are, Where We're Going; Mott, T.H.; p. 598.

Raising Productivity of Hospitals by Sharing Produc-

tivity Gains; Fein, M.; p. 281.

Unifying Theory of Productivity (UTOP©): Managing Human Resources; Bodek, N.; p. 327.

Well-Trained First-Line Supervisors—The Key to Improved Productivity; Reed, S.K.; p. 408.

Why the Resistance to Total Productivity Measurement?; Mundel, M.E.,; p. 349.

0200 Employee Relations

0205 Job Evaluation

Boogey Man of Comparable Worth; Gottlieb, B.; p. 336.

0300 Engineering Economics

0302 Equipment replacement

Economics of New Technology: Equipment Replacement Using Risk-Related Criteria; Fleischer, G.A.; p. 176.

Economics of New Technology: Justification of Flexible Manufacturing Systems with the Analytical Hierarchy Process; Varney, M.S., Sullivan, W.G. and Cochran, J.K.; p. 181.

Robot Selection Model; Jones, M.S.; p. 383.

0304 General

Development and Implementation of a Management Information System for Property Appraisal; Iskander, W.H.; p. 101.

Economic Design of a Dynamic X-Control Chart; Parhideh, B. and Case, K.E.; p. 577.

Economics of New Technology: Information Economics; Buck, J.R. and Raz, T; p. 191.

Economics of New Technology: Market-Based Planning to Support the Time-Phased Introduction of Programmable Automation; Burstein, M.C. and Ezzekmi, A.; p. 169.

Economics of New Technology: System Design and Development Methodology; Blank, L. and Carrasco, H.; p. 161.

Expert System for Ratio Analyses; Hazard, T.W.; p. 95.

0400 Facilities Planning, Design

0401 Environment protection

Economics of Residential Wind Generator Systems; Estes, C.B.; p. 150.

Hazardous Waste Management—A Cost Reduction Opportunity?; Webb, R.E., and Turner, W.C.; p. 425.

0403 Office Layout

Sizing Mental Health Clinics: An Analytical Approach; Yap, E. and Lisbin, S.J.; p. 287.

0404 Plant Design, Construction

Energy Management Control System Helps and Hazards; Morrison, M.; p. 135.

0407 Plant layout evaluation/testing procedures

A Fuzzy Set Approach to Layout Analysis; Wilhelm, M. R., Karowski, W. and Evans, G.W.; p. 245.

ESD-Understanding the Problems and Methods for Controlling; Pukanic, R.L.; p. 119.

0500 Functional Operations

0503 Computer operation, software

Application of PERT for Introducing New Products; Mineard, D.R., Jr.; p. 431

Automated Software Q/A Audit Tools; Polsley, M.J.; p. 3

Building a Simulation Generator for Manufacturing Cell Design and Control; Haddock, J. and Davis, R.P.; p. 237.

Decision-Support Methodology for Developing Performance-Based Salary Policies; Garcia-Diaz, A.; p. 32.

Design of an Inventory Management Package on a Microcomputer; Nandakumar, G.; p. 84.

Design, Development, and Utilization of Software Support for the Multi-Criteria Performance Measurement and Evaluation Technique; Swim, L.K. and Sink, D.S.; p. 414.

Economics of New Technology: System Design and Development Methodology; Blank, L. and Carrasco, H.; p. 161.

Industrial Engineering Support Systems—User's Perceptions and Needs; Bedworth, D.D. and Whitehouse, G.E.; p. 107.

Introducing Statistical Selective Assembly-A Means of Producing High Precision Assemblies From Low Precision Components; Boyer, D.E. and Nazemetz, J.W.; p. 562.

Introduction to STARC-A Project Scheduling Package; Badiru, A.B. and Whitehouse, G.E.; p. 539.

Robot Selection Model; Jones, M.S.; p. 383.

Using Office Automation to Develop Software Documentation; Danner, D.L.; p. 66.

0504 Maintenance, plant engineering

Achieving Potential Productivity Improvements From a New Maintenance Facility; Peebles, C.W.; p. 614.

Component Plan for Effective Facility Maintenance Management; Patrick, M.S.; p. 661.

0600 Human Engineering

0601 Behavioral Science

Boogey Man of Comparable Worth; Gottlieb, B.; p. 336.

Consideration of Organizations' Behavioral Objectives in the Design of Information Systems; Headrick, R.W. and Morgan G.W.; p. 60.

Experiments in Decision Making: Creative vs. Forceful Groups; Hazard, T.W., p. 378.

0603 Ergonomics

Ergonomics: Human Comfort Engineering; Peterson, K.L.; p. 199.

Human Force Platform for Measuring Mental Stress in Seated Operations; Young, H.H. and Adiga, S; p. 204.

Modapts Plus©, A Superior System for Work Analysis; Gerber, D.L. and Heyde, G. C.; p. 212.

Workplace Design Considerations in Industrial Automation; Knight, J.W. and Bhise, V.; p. 679.

0605 Motivation

Integrated Operations Planning and Motivation; Cross, K.F.; p. 374.

Performance Action Teams: Update on Continuing Developments; Sink, D.S. and Kiser, K.J.; p. 311.

Productivity Incentives—Motivating Workers with Money; Niles, J.L.R.; p. 639.

0606 Personnel Scheduling

Installing a Comprehensive Manpower Planning and Budgeting System in a Natural Gas Utility; DeFee, R.W.; p. 631.

0609 Training

Minimizing Work Standards and Job Evaluation Plan Conflicts and Disputes Through Training; Brady, T.F.; p. 333.

0610

Improving Employee Communications & Participation; Ice, L.R., Jr.; p. 366.

0700 Incentive Plans

0703 Special Types

Raising Productivity of Hospitals by Sharing Productivity Gains; Fein, M.; p. 281.

0705 General

Cost Effective Plant Operation Through Incentives; Savage, J.A.; p. 591.

Incentive Practices World-Wide (Incentive Effectiveness: In Theory and in Practice); Sellie, C.N., p. 356.

Productivity Incentives—Motivating Workers with Money; Niles, J.L.R.; p. 639.

0800 Industrial Engineering

0803 Consulting

So You Want To Be A Management Consultant; Clark, C.E.; p. 325.

0804 Education

Computer-Aided Production Systems Laboratory at USC; Khoshnevis, B.; p. 488.

Laboratory Projects in Flexible Manufacturing and Robotics Education; Leigh, D.J. and Nazemetz, J.W.; p. 479.

0805 IE's, IE Technologists

Industrial Engineering Support to the Strategy of Manufacturing Industries-The Steel Industry Example; Flores, B.E. and Rodriquez, R.; p. 587.

Need for an Industrial Engineering Function Within Information Processing Organizations; Richerson, M.E.: p. 411.

Professional Communications Strategies for the Industrial Engineer; Spechler, J.W. and Spechler, M.M.; p. 396.

0900 Industries

0901 Financial

A Improving Productivity of Loan Officers in Large Commercial Banks; Murti, A.K.: p. 27.

A Participative Approach To Work Measurement; Schoen, J.L.; p. 18.

Credit Card Processing Operations Using Optical Character Recognition (OCR); Hillman, J.R.; p. 15.

Decision-Support Methodology for Developing Performance-Based Salary Policies; Garcia-Diaz, A.; p. 32.

Production Dynamics Study-Returns Unit; Bellisario L.; p. 22.

0902 Government

A Design for a University Cost Reduction Program; Angelelli, C.L. and Byrd, Jr., J.; p. 259.

Demonstration of a Statewide Productivity and Quality Enhancement Program; Leonard, M. S., Miller, O.W., David, L.G. and Goldman, J.; p. 265.

0903 Health care and other services

A Computer Aided Productivity Monitoring System; Caudill, H.L.; p. 45.

Component Plan For Effective Facility Maintenance Management; Patrick, M.S.; p. 661.

Forecasting Inpatient Days for DRG-36 With Exponential Smoothing; Desai, H.B. and Morgenthaler, C. R.; p. 296.

High Level Predetermined Time Standard System and Short-Cycle Tasks; Singleton, S.K., Masud, A. and Malzahn, D.; p. 656.

Raising Productivity of Hospitals by Sharing Productivity Gains; Fein, M.; p. 281.

Sizing Mental Health Clinics: An Analytical Approach; Yap, E. and Lisbin, S. J.; p. 287.

0904 Manufacturing

Analysis of Robotic Technology Alternatives; Fisher, E.L. and Maimon, O.Z.; p. 227.

Automated Software Q/A Audit Tools; Polsley, M.J.; p. 3

Automatic History Matching in Production Modeling; Moore, L.T. and Lamba, J.; p. 497.

Building a Simulation Generator for Manufacturing Cell Design and Control; Haddock, J. and Davis, R.P.; p. 237.

Computer-Aided Production Systems Laboratory at USC; Khoshnevis, B.; p. 488.

Determining the Cycle Time of Robot Assembly Operations; Shell, R.L., Okogbaa, O.G., Patel, M. and Damachi, N.A.; p. 669.

Economics of New Technology: Justification of Flexible Manufacturing Systems with the Analytical Hierarchy Process; Varney, M.S., Sullivan, W.G. and Cochran, J.K., p. 181.

Economics of New Technology: Market-Based Planning to Support the Time-Phased Introduction of Programmable Automation; Burstein, M.C. and Ezzekmi, A.; p. 169.

Electronics Parts Handling in Receiving Insepction; Wilson, M.F.; p. 123.

ESD-Understanding the Problems and Methods for Controlling; Pukanic, R.L.: p. 119.

Framework for Flexible Manufacturing Systems; Kiran, A.S. and Tansel, B.B.; p. 446.

Industrial Engineering Support to the Strategy of Manufacturing Industries-The Steel Industry Example; Flores, B.E. and Rodriquez, R.; p. 587.

Interactive Multicriteria Approach for Optimal Machining Operations; Malakooti, B.; p. 443.

Introducing Statistical Selective Assembly-A Means of Producing High Precision Assemblies From Low Precision Components; Boyer, D.E. and Nazemetz, J.W.; p. 562.

Laboratory Projects in Flexible Manufacturing and Robotics Education; Leigh, D.J. and Nazemetz, J.W.; p. 479.

Material Management at Toyota Japan and U.S.; Sepehri, M., Carlson, J., and Manrique, E; p. 389.

Microcomputer Assembly From An IE Viewpoint; Seelin, S.; p. 128.

One Stage Scheduling of Preemptive Jobs on Parallel Machines with Setup Times and Due Dates; Pourbabai, B.; p. 525.

Physical and Graphical Modeling of Flexible Machining Systems; Ghosh, B.K., Wysk, R.A., Wu, S.D. and Cohen, P.H.; p. 451.

Planning and Inventory Control In Low Volume Environments; Swann, D.M.; p. 8

Productivity Improvement at United States Steel Corporation—Where We've Been, Where We Are, Where We're Going; Mott, T.H.; p. 598.

Stockless Production Supported by Flexible Manufacturing in the Job Shops; Sepehri, M.,; p. 404.

Total Systems Concept in the Factory of the Future; Benzin, R.W.; p. 460.

Vehicle Routing to Support Automated Manufacturing; Blair, E.L., p. 254.

Workplace Design Considerations in Industrial Automation; Knight, J.W. and Bhise, V.; p. 679.

0905 Transportation, distribution

Achieving Potential Productivity Improvements From a New Maintenance Facility; Peebles, C.W.; p. 614.

Finding A Simple Sequential Algorithm for Your Transportation Problem; Fang, S.C. and Murr, M.R.; p. 533.

Heuristical Programming Approach to the Truck Dispatching Problem; Lloyd, L.W. and Iskander, W.H.; p. 609.

0906 Others

Engineered Meter Reading Route Standards; Scarfuto, J.B.; p. 626.

Evaluation of Time Series Models for Energy Usage Forecasting; Stricker, W.K. and Dieck, A.J.; p. 619.

Installing a Comprehensive Manpower Planning and Budgeting System in a Natural Gas Utility; DeFee, R.W.; p. 631.

1000 Management

So You Want To Be A Management Consultant; Clark, C.E.; p. 325.

1002 Communications

A Improving Productivity of Loan Officers in Large Commercial Banks; Murti, A.K.; p. 27.

Improving Employee Communications & Participation; Ice, L.R., Jr.; p. 366.

Professional Communications Strategies for the Industrial Engineer; Spechler, J.W. and Spechler, M.M.; p. 396.

Using Office Automation to Develop Software Documentation; Danner, D.L.; p. 66.

1003 Decision Making

Analysis of Robotic Technology Alternatives; Fisher, E.L. and Maimon, O.Z.; p. 227.

Computerized Decision Rules: User's Interface Problems; Ntuen, C.A.; p. 89.

Decision-Support Methodology for Developing Performance-Based Salary Policies; Garcia-Diaz, A.; p. 32.

Economics of New Technology: Justification of Flexible Manufacturing Systems with the Analytical Hierarchy Process; Varney, M.S., Sullivan, W.G. and Cochran, J.K.; p. 181.

Experiment in Decision Making: Creative vs. Forceful Groups; Hazard T.W., p. 378.

Expert System for Ratio Analyses; Hazard, T.W.; p. 95.

Industrial Engineering Support to the Strategy of Manufacturing Industries-The Steel Industry Example; Flores, B.E. and Rodriquez, R.; p. 587.

Performance Action Teams: Update on Continuing Developments; Sink, D.S. and Kiser, K.J.; p. 311.

1004 Information Systems

Consideration of Organizations' Behavioral Objectives in the Design of Information Systems; Headrick, R.W. and Morgan, G.W.; p. 60.

Development and Implementation of a Management Information System for Property Appraisal; Iskander, W.H.; p. 101.

Economics of New Technology: Information Economics; Buck, J.R. and Raz, T; p. 191.

Implementation Strategy Computerized Information Systems; Oh, K.K.; p. 53.

Intermediate Stocks in MRP Systems; Moore, L.T.; p. 529.

Need for an Industrial Engineering Function Within Information Processing Organizations; Richerson, M.E.; p. 411.

SPIRES; Chang, C.A., Leonard, M.S., Yeralan, S. and Yu, M.; p. 73.

1005 Management development

Integrated Operations Planning and Motivation; Cross, K.F.; p. 374.

Unifying Theory of Productivity (UTOP©): Managing Human Resources; Bodek, N.; p. 327.

Well-Trained First-Line Supervisors—The Key to Improved Productivity; Reed, S.K.; p. 408.

1007 Project Management

Application of PERT for Introducing New Products; Mineard, D.R., Jr.; p. 431.

Hazardous Waste Management—A Cost Reduction Opportunity?; Webb, R.E., and Turner, W.C.; p. 425.

Introduction to STARC-A Project Scheduling Package; Badiru, A.B. and Whitehouse, G.E.; p. 539.

1008 Controls

MEP . . . Measuring and Managing Clerical Productivity; Bockerstette, J.A.; p. 371.

Why the Resistance to Total Productivity Measurement?; Mundel, M.E.,; p. 349.

1100 Material Handling

1102 Conveyors

Closed-Loop Conveyor Systems with Discrete Random Material Flow; Bastani, A.S. and Elsayed, E.A.; p. 221.

1105 Dispatching, scheduling

Vehicle Routing to Support Automated Manufacturing; Blair, E.L., p. 254.

1200 Methods Engineering

1201 Automation, mechanization

Determining the Cycle Time of Robot Assembly Operations; Shell, R.L., Okogbaa, O.G., Patel, M. and Damachi, N.A.; p. 669.

Economics of New Technology: Market-Based Planning to Support the Time-Phased Introduction of Programmable Automation; Burstein, M.C. and Ezzekmi, A.; p. 169.

Framework for Flexible Manufacturing Systems; Kiran, A.S. and Tansel, B.B.; p. 446.

Physical and Graphical Modeling of Flexible Machining Systems; Ghosh, B.K. Wysk, R.A., Wu, S.D. and Cohen, P.H.; p. 451.

Robot Selection Model; Jones, M.S.; p. 383.

Using Office Automation to Develop Software Documentation; Danner, D.L.; p. 66.

Vehicle Routing to Support Automated Manufacturing; Blair, E.L., p. 254.

1202 Computer control

Interactive Multicriteria Approach for Optimal Machining Operations; Malakooti, B.; p. 443.

1203 Energy conservation

Development of a Commercial Energy Audit Program for a Public Utility Company; Doering, R.D. and Denning, R.G.; p. 142.

Economics of Residential Wind Generator Systems; Estes, C.B.; p. 150.

Energy Management Control System Helps and Hazards; Morrison, M.; p. 135.

Evaluation of Time Series Models for Energy Usage Forecasting; Stricker, W.K. and Dieck, A.J.; p. 619.

1204 Indentification systems

Credit Card Processing Operations Using Optical Character Recognition (OCR); Hillman, J.R.; p. 15.

1208 Principles, analysis

Economics of New Technology: System Design and Development Methodology; Blank, L. and Carrasco, H.; p. 161.

Microcomputer Assembly From An IE Viewpoint; Seelin, S.; p. 128.

Total Systems Concept in the Factory of the Future; Benzin, R.W.; p. 460.

1213 Work design, methods improvement

Development of Computer-Aided Time Standards; Gibson, D.C. and Schmeidler, N.F.; p. 646.

Workplace Design Considerations in Industrial Automation; Knight, J.W. and Bhise, V.; p. 679.

1215 Testing/installation procedures

Human Force Platform for Measuring Mental Stress in Seated Operations; Young, H.H. and Adiga, S; p. 204.

1300 Quantitative methods

1301 Mathematical models

Automatic History Matching in Production Modeling; Moore, L.T. and Lamba, J.; p. 497.

Economics of New Technology: Equipment Replacement Using Risk-Related Criteria; Fleischer, G.A.; p. 176.

Finding A Simple Sequential Algorithm for Your Transportation Problem; Fang, S.C. and Murr, M.R.; p. 533.

Multiple Criteria Model for Acceptance Sampling; Malakooti, B. and Balhorn, W.H.; p. 571.

Optimization of Productivity Through Mathematical Programming; Mo, D.W.; p. 510.

Statistical Approximations to Resource Allocation/Budgeting by Group Decisions; Chu, J.T.; p. 502.

Utilization of Inventory and Satisfaction of Demand; Kabak, I.W. and Simonoff, J.S.; p. 516.

1304 Regression analysis

Multiple Regression Analysis of Binder Line Productivity; Grady W.E.; p. 275.

1305 Simulation/games

Building a Simulation Generator for Manufacturing Cell Design and Control; Haddock, J. and Davis, R.P.; p. 237.

Expert System for Ratio Analyses; Hazard, T.W.; p. 95.

Introducing Statistical Selective Asembly-A Means of Producing High Precision Assemblies From Low Precision Components; Boyer, D.E. and Nazemetz, J.W.; p. 562.

Introduction to STARC-A Project Scheduling Package; Badiru, A.B. and Whitehouse, G.E.; p. 539.

Manpower Scheduling for Unbalanced Production Lines; Iskander, W.H. and Chou, J.; p. 546.

Physical and Graphical Modeling of Flexible Machining Systems; Ghosh, B.K., Wysk, R.A., Wu, S.D. and Cohen, P.H.; p. 451.

1306 Applied probability

A Fuzzy Set Approach to Layout Analysis; Wilhelm, M. R., Karowski, W. and Evans, G.W.; p. 245.

Closed-Loop Conveyor Systems with Discrete Random Material Flow; Bastani, A.S. and Elsayed, E.A.; p. 221.

Economic Design of a Dynamic X-Control Chart; Parhideh, B. and Case, K.E.; p. 577.

Statistical Inferential Estimate for Cycle Counting Frequency; Nowak, J.W. and Dessouky, M.I.; p. 471.

1307 Experimental design

Investigation of the Effects of Quality Determinants; Johnson; M.M. and Lo, R.; p. 555.

1400 Production and Inventory Control

1401 Distribution systems

Heuristical Programming Approach to the Truck Dispatching Problem; Lloyd, L.W. and Iskander, W.H.; p. 609.

1402 Forecasting

Evaluation of Time Series Models for Energy Usage Forecasting; Stricker, W.K. and Dieck, A.J.; p. 619.

Forecasting Inpatient Days for DRG-36 With Exponential Smoothing; Desai, H.B. and Margenthaler, C. R.; p. 296.

Production Dynamics Study-Returns Unit; Bellisario L.; p. 22.

1403 Inventory control

Intermediate Stocks in MRP Systems; Moore, L.T.; p. 529.

Planning and Inventory Control In Low Volume Environments; Swann, D.M.; p. 8.

Statistical Inferential Estimate for Cycle Counting Frequency; Nowak, J.W. and Dessouky, M.I.; p. 471.

Utilization of Inventory and Satisfaction of Demand; Kabak, I.W. and Simonoff, J.S.; p. 516.

1404 Materials Management

Closed-Loop Conveyor Systems with Discrete Random Material Flow; Bastani, A.S. and Elsayed, E.A.; p. 221.

Design of an Inventory Management Package on a Microcomputer; Nandakumar, G.; p. 84.

Electronics Parts Handling in Receiving Inspection; Wilson, M.F.; p. 123.

Material Management at Toyota Japan and U.S.; Sepehri, M., Carlson, J., and Manrique, E; p. 389.

Stockless Production Supported by Flexible Manufacturing in the Job Shops; Sepehri, M.,; p. 404.

1407 Production scheduling

Manpower Scheduling for Unbalanced Production Lines; Iskander, W.H. and Chou, J.; p. 546.

One Stage Scheduling of Preemptive Jobs on Parallel Machines with Setup Times and Due Dates; Pourbabai, B.; p. 525.

1500 Quality Control

1501 Inspection

Electonics Parts Handling in Receiving Inspection; Wilson, M.F.; p. 123.

1502 Quality Control

Automated Software Q/A Audit Tools; Polsley, M.J.; p. 3.

Demonstration of a Statewide Productivity and Quality Enhancement Program; Leonard, M. S., Miller, O.W., David, L.G. and Goldman, J.; p. 265.

Economic Design of a Dynamic X-Control Chart; Parhideh, B. and Case, K.E.; p. 577.

ESD-Understanding the Problems and Methods for Controlling; Pukanic, R.L.; p. 119.

Investigation of the Effects of Quality Determinants; Johnson, M.M. and Lo, R.; p. 555.

Statistical Inferential Estimate for Cycle Counting Frequency; Nowak, J.W. and Dessouky, M.I.; p. 471.

1504 Sampling

Multiple Criteria Model for Acceptance Sampling; Malakooti, B. and Balhorn, W.H.; p. 571.

1600 Work Measurement

A Participative Approach To Work Measurement; Schoen, J.L.; p. 18.

1602 Computer Aid

Development of Computer-Aided Time Standards; Gibson, D.C. and Schmeidler N.F.; p. 646.

Modapts Plus®, A Superior System for Work Analysis; Gerber, D.L. and Heyde, G.C.; p. 212.

1605 Predetermined time systems

High Level Predetermined Time Standard System and Short-Cycle Tasks; Singleton, S.K., Masud, A. and Malzahn, D.; p. 656.

1608 Standards development

Engineered Meter Reading Route Standards; Scarfuto, J.B.; p. 626.

Minimizing Work Standards and Job Evaluation Plan Conflicts and Disputes Through Training; Brady, T.F.; p. 333.

1700 Data processing systems design

1703 Analysis techniques

Computerized Decision Rules: User's Interface Problems; Ntuen, C.A.; p. 89.

1704 Information retrieval

Consideration of Orgnaizations' Behavioral Objectives in the Design of Information Systems; Headrick, R.W. and Morgan, G.W.; p. 60.

SPIRES; Chang, C.A., Leonard, M.S., Yeralan, S. and Yu, M.; p. 73.

1705 General

A Computer Aided Productivity Monitoring System; Caudill, H.L.; p. 45.

Implementation Strategy Computerized Information Systems; Oh, K.K.; p. 53.

Industrial Engineering Support Systems—User's Perceptions and Needs; Bedworth, D.D. and Whitehouse, G.E.; p. 107.

Need for an Industrial Engineering Function Within Information Processing Organizations; Richerson, M.E.; p. 411.

Total Systems Concept in the Factory of the Future; Benzin, R.W.; p. 460.

Proceedings: 1985 Fall Industrial Engineering Conference

Chicago, IL, December 8-11, 1985

Subjects (coded) and titles

0100 Costs

0103 Cost estimating

Generalized Solution for Constrained Metal Cutting Economics Problem; Creese, R. C. and Tsai, P.; p. 113.

0104 Cost reduction programs

Cost Savings Through Computer Aided Vendor Targetting; Heward, J. H.; p. 349.

0105 Productivity

An Integrated Approach to Productivity and Quality Improvement; Howell, M. T.; p. 506.

Flexibility and Productivity in Manufacturing Systems; Buzacott, J. A. and Mandelbaum, M.; p. 404.

Hospital System Integration Through Productivity and Quality Control; Dieck, A. J. and Leonard, M. S.; p. 294.

Innovative Advances in Productivity Measurement and Evaluation in the Aerospace and Defense Industry; Sink, D. S., Dhir, S. and Roberts, C. A.; p. 329.

Integrated Productivity Improvement—A Case Example; Jetton, B. R. and Barra, R. J.; p. 501.

Measuring Productivity in an Architectural Engineering Firm; Martin, J. L.; p. 510.

Productivity Improvement Methods; Hauck, W. C. and Ross, T. L.; p. 9.

Productivity Measurement Based On The Technology Factor Index: A case Study; Hawaleshka, O. and Mohamed, A.; p. 353.

The Productivity Factor In Management Decision-Making; Sumanth, D. J. and Genie, I.; p. 46.

0106 Accounting

Linking Industrial Engineering Services to Expense Reporting; Swift, W. R.; p. 288.

0200 Employee Relations

0203 Implementing Change

"C.C. & Q.W.L." Up or On-The-Rocks?; Cubbin, S. M.; p. 28.

An Industrial Engineer's Role in Strategic and Human Resources Planning for Power Generation Systems; Semmer, R. H. and Mogollon, M. T.; p. 516.

Incentives: How They Affect the Labor Force and Supervisors; Sellie, C.; p. 19.

0300 Engineering economics

0301 Cash Flow Analysis

Discounted Fuzzy Cash Flow Analysis; Ward, T. L.; p. 476.

0302 Equipment replacement

Equipment Requirements Planning Using a Simulation Support System; Rolston, L. J.; p. 88.

0303 Investment analysis

Evaluation of Computer-Integrated Manufacturing Systems; Canada, J. R.; p. 162.

Justification of Advanced Manufacturing Technology Using Expert Systems; LeClair, S. R. and Sullivan, W. G.; p. 362.

0304 General

Evaluation of Manufacturing Methods Based on Production Economics—An Alternative to MAPI Based Procedures; Tanchoco J. M. A., Ghosh, B. K., Stuart, M. S. and Coursey, W., Jr.; p. 371.

The Life Cycle Economic Evaluation of Interdependent Projects; Skipper, L. R. and Fabrycky, W. J.; p. 381.

0400 Facilities planning, design

0403 Office Layout

Office Automation Roadblocks: Issues for the 1980s; Hohner, G. J.; p. 321.

0406 Plant layout principles

0409 Property protection

Cell Layout Utilizing the CIM Data Base; James G. S.; p. 239.

Nuclear Power Plant Security Staffing Review; Seemer, R. H. and McBean, G. A.; p. 519.

0410 General

Aggregate Industrial Capacity Expansion: A Multiple Criteria Approach; Lawrence, K. D., Lawrence, S. M., Gonzalez, J. J. and Reeves, G. R.; p. 414.

An Analysis of Facility and Production Capacity; Ice, C. I.; p. 448.

Equipment Requirements Planning Using a Simulation Support System; Rolston, L. J.; p. 88.

0500 Functional operations

0503 Computer operation, software

A Microcomputer-Based Cognitive Simulation Model for Preventive Maintenance Scheduling Under Inspection Policy; Ntuen, C. A.; p. 216.

A Survey of Robot Programming Languages; Deisenroth, M. P.; p. 191.

Measuring Managerial Effectiveness: A Microcomputer Based Approach; Bures, A. L. and Beheshti, H. M.; p. 34.

Microcomputer-Based Process Planning Systems; Wang, H. P. and Wysk, R. A.; p. 145.

0504 Maintenance plant engineering

A Microcomputer-Based Cognitive Simulation Model for Preventive Maintenance Scheduling Under Inspection Policy; Ntuen, C. A.; p. 216.

Evaluation Criteria for Decisions on Diagnostic Predictive Maintenance; ElSayed, A. E., ElKhatib, A. and Elwany, H.; p. 118.

Maintenance Craft Scheduling System; Wilkens, R. H.; p. 392.

Mechanized Inspection and In-train Repairs to Achieve Productivity Improvements and Improved Equipment Utilization; Peterman, W. W.; p. 283.

Multiple Location Energy Accounting System: A Case Study; Shirley, J. M.; p. 259.

Reliability Centered Maintenance: An Industrial Engineering Approach to Preventive Maintenance; Seemer, R. H.; p. 522.

The IE's Role in Vehicle Maintenance and Shop Rehabilitation; Nielsen, J. R.; p. 276.

0505 Purchasing

Cost Savings Through Computer Aided Vendor Targetting; Heward, J. H.; p. 349.

0600 Human engineering

0601 Behavioral science

Computer-Aided Manufacturing Impact on Productivity, Production Quality, Job Satisfaction, and Psychological Stress; Edosamwan; J. A.; p. 469.

Creativity in Engineering: A Survival Kit; Morrison, D. C.; p. 41.

0603 Ergonomics

Study of Heart Rate to Determine Work Load; Wilson, J. L. and Wygant, R.; p. 482.

The Practice and Management of Industrial Ergonomics; Alexander, D. C.; p. 428.

0604 Learning

The T Design: A Metacognitive Model for Stimulating Creative Problem Solving in Engineering Students; Hayes, H. L., p. 38.

0606 Personnel Scheduling

Manpower Requirements Forecasting: A Case Example; Oberle, L. R. and Scott, P. M.; p. 526.

0610 Sociological factors

Management Strategies for Productivity Improvement at the Enterprise Level in Developing Nations; Shell, R. L. and Damachi, N. A.; p. 342.

0700 Incentive plans

0705 General

Incentives: How They Affect the Labor Force and Supervisors; Sellie, C.; p. 19.

0800 Industrial Engineering

0801 AIIE

Work Sampling—An IIE Utility Industry Survey; Seemer, R. H., DeLuca, L. G. and McBean, G. A.; p. 514.

0804 Education

The T Design: A Metacognitive Model for Stimulating Creative Problem Solving in Engineering Students; Hayes, H. L., p. 38.

0805 IE's, IE technologists

Artificial Intelligence and its Relevance to Industrial Engineers; Adiga, S.; p. 309.

Knowledge-Based Systems and Industrial Engineering; Masud, A. S. M.; p. 400.

The Industrial Engineer as Change Master?; Sink, D. S.; p. 3.

0806 IE management

Linking Industrial Engineering Services to Expense Reporting; Swift, W. R.; p. 288.

Measuring Productivity in an Architectural Engineering Firm; Martin, J. L.; p. 510.

The Practice and Management of Industrial Ergonomics; Alexander, D. C.; p. 428.

0808 General

Creativity in Engineering: A Survival Kit; Morrison, D. C.; p. 41.

0900 Industries

0902 Government

MIS Success in a Federal Government Organization; Mallak, L. A. and Kurstedt, H. A., Jr.; p. 299.

0903 Health Care and Other Services

Hospital System Integration Through Productivity and Quality Control; Dieck, A. J. and Leonard, M. S.; p. 294.

The Design Of A Quality Assurance System For Hospital Pharmacies; Shell, R. L., Okogbaa, O. G. and Mimouni, C.; p. 268.

0904 Manufacturing

A Methodology for the Determination of the Cause of Casting Defects and Their Removal; Creese, R. C.; p. 265.

A Relational Data Model For A Manufacturing Database; Taraman, S. R.; p. 195.

Animated Simulation Graphics for a Manufacturing Conveyor System; Barta, T. A. and Chu S. J.; p. 247.

Appraising a Manufacturing Firm—Value of new Technologies; Salomon, D. P.; p. 55.

Assembly Systems for High-Tech Electronic Components—A Case Study; Pukanic, R. L.; p. 209.

Building the Factory of the Future Today; Glenney, N. E. and Mackulak, G. T.; p. 228.

Cell Layout Utilizing the CIM Data Base; James G. S.; p. 239.

CIM—A Global View of the Factory; Mize, J. H. and Seifert, D. J.; p. 173.

Computer Assisted Manufacturability Rating of Printed Wiring Board Assemblies; Bao, H. and Frazier, J. M.; p. 204.

Computer-Aided Manufacturing Impact on Productivity, Production Quality, Job Satisfaction, and Psychological Stress; Edosamwan; J. A.; p. 469.

Computer-Aided Production Standards Calculations; Banta, W. E.; p. 102.

Electric Track Vehicles in Electronic Manufacturing; McLendon, R. J.; p. 421.

Evaluation of Computer-Integrated Manufacturing Systems; Canada, J. R.; p. 162.

Evaluation of Manufacturing Methods Based on Production Economics—An Alternative to MAPI Based Procedures; Tanchoco, J. M. A., Ghosh, B. K., Stuart, M. S. and Coursey, W., Jr.; p. 371.

Flexibility and Productivity in Manufacturing Systems; Buzacott, J. A. and Mandelbaum, M.; p. 404.

Generalized Solution for Constrained Metal Cutting Economics Problem; Creese, R. C. and Tsai, P.; p. 113.

Group Scheduling Heuristics for Minimum Makespan in Multi-Stage Manufacturing Systems; Cho, K. K. and Ham, I.; p. 130.

Group Technology Cell Allocation; Rodriquez, R. and Adaniya, O.; p. 125.

Innovative Advances in Productivity Measurement and Evaluation in the Aerospace and Defense Industry; Sink, D. S., Dhir, S. and Roberts, C. A.; p. 329.

Integrated Manufacturing: Think then Act; Paris, M. L.; p. 64.

Is Cellular Manufacturing Right for You?; Green, T. J. and Cleary, C. M.; p. 181.

Justification of Advanced Manufacturing Technology Using Expert Systems; LeClair, S. R. and Sullivan, W. G.; p. 362.

Knowledge-Based Control of a Flexible Manufacturing System; Young, R. E. and Rossi, M.; p. 178.

Management Issues In JIT and OPT Implementations; Leahy, J. A.; p. 82.

Materials Management Systems for Computer Integrated Manufacturing; Kurstedt, H. A., Jr., Jones, R. M., Reasor, R. J. and Peterson, J. L.; p. 154.

Scheduled Idle Time: A New Productivity Concept For The Shop Floor; Findlay, D. O.; p. 95.

Scheduling Rules For Just-In-Time Policy In A Computer Integrated Manufacturing System; Okogbaa, O. G., Shell, R. L., Patel, M. and Damachi, N. A.; p. 137.

0905 Transportation, distribution

Mechanized Inspection and In-train Repairs to Achieve Productivity Improvements and Improved Equipment Utilization; Peterman, W. W.; p. 283.

The IE's Role in Vehicle Maintenance and Shop Rehabilitation; Nielsen, J. R.; p. 276.

Work Measurement for the Transportation Supervisor; Downes, W. A. and Lutz, D. E.; p. 454.

0906 Others

An Industrial Engineer's Role in Strategic and Human Resources Planning for Power Generation Systems; Seemer, R. H. and Mogollon, M. T.; p. 516.

In-House Development/Integration of Power Plant Data Acquisition System; Paul, R. L. and Sorge, J. M.; p. 540.

Nuclear Power Plant Security Staffing Review; Seemer, R. H. and McBean, G. A.; p. 519.

1000 Management

1002 Communications

A Multi-Modal Communication Strategy for Human-Computer Interaction; Fisher, E. L. and Joost, M. G.; p. 440.

1003 Decision making

The Industrial Engineer as Change Master?; Sink, D. S.; p. 3.

The Productivity Factor In Management Decision-Making; Sumanth, D. J. and Genie, I.; p. 46.

1004 Information systems

Applications of A General Purpose Information Management System; Frantzen, R. J.; p. 532.

Artificial Intelligence and its Relevance to Industrial Engineers; Adiga, S.; p. 309.

Evaluation Criteria for Decisions on Diagnostic Predictive Maintenance; ElSayed, A. E., ElKhatib, A. and Elwany, H.; p. 118.

Information Retrieval Architectures for Expert System/DBMS Communication; Fisher, E. L.; Rasdorf, W. J. and Bhatt, R. V.; p. 315.

Justification of Advanced Manufacturing Technology Using Expert Systems; LeClair, S. R. and Sullivan, W. G.; p. 362.

Knowledge-Based Control of a Flexible Manufacturing System; Young, R. E. and Rossi, M.; p. 178.

Knowledge-Based Systems and Industrial Engineering; Msaud, A. S. M.; p. 400.

Measuring Managerial Effectiveness: A Microcomputer Based Approach; Bures, A. L. and Beheshti, H. M.; p. 34.

MIS Success in a Federal Government Organization; Mallak, L. A. and Kurstedt, H. A., Jr.; p. 299.

Statistical Process Control—Management Issues; Zubairi, M. M.; p. 73.

1005 Management development

Management Strategies for Productivity Improvement at the Enterprise Level in Developing Nations; Shell, R. L. and Damachi, N. A.; p. 342.

1008 Controls

CIM—A Global View of the Factory; Mize, J. H. and Seifert, D. J.; p. 173.

1100 Material Handling

1101 Containers, unit loads

Robotics Unitization of Warehouse Pallet Loads; Malstrom, E. M. Tsai, R. D. and Meeks, H. D.; p. 222.

1102 Conveyors

Animated Simulation Graphics for a Manufacturing Conveyor System; Barta, T. A. and Chu S. J.; p. 247.

1107 Methods and systems design

Building the Factory of the Future Today; Glenney, N. E. and Mackulak, G. T.; p. 228.

1200 Methods Engineering

1201 Automation, mechanization

A Survey of Robot Programming Languages; Deisenroth, M. P.; p. 191.

Appraising a Manufacturing Firm—Value of new Technologies; Salomon, D. P.; p. 55.

Cinematic Motion Modeling and Simulation on Micro-computer: An Economic Approach for Robot Time Performance Analysis; Dao, T. M.; p. 463.

Office Automation Roadblocks: Issues for the 1980s; Hohner, G. J.; p. 321.

Robotic Unitization of Warehouse Pallet Loads; Malstrom, E. M. Tsai, R. D. and Meeks, H. D.; p. 222.

1203 Energy Conservation

Multiple Location Energy Accounting System: A Case Study; Shirley, J. M.; p. 259.

1205 Manufacturing engineering

Group Technology Cell Allocation; Rodriquez, R. and Adaniya, O.; p. 125.

1208 Principles, analysis

Assembly Systems for High-Tech Electronic Components—A Case Study; Pukanic, R. L.; p. 209.

Computer Assisted Manufacturability Rating of Printed Wiring Board Assemblies; Bao, H. and Frazier, J. M.; p. 204.

Integrated Manufacturing: Think then Act; Paris, M. L.; p. 64.

Management Strategies for Productivity Improvement at the Enterprise Level in Developing Nations; Shell, R. L. and Damachi, N. A.; p. 342.

Productivity Improvement Methods; Hauck, W. C. and Ross, T. L.; p. 9.

1209 Process design

Is Cellular Manufacturing Right for you?; Green, T. J. and Cleary, C. M.; p. 181.

Microcomputer-Based Process Planning Systems; Wang, H. P. and Wysk, R. A.; p. 145.

1211 Value analysis, engineering

Improving Product Quality and Value—The Easy Way!; Bush, J. G.; p. 13.

1213 Work design, methods improvement

Study of Heart Rate to Determine Work Load; Wilson, J. L. and Wygant, R.; p. 482.

1215 Testing/installation procedures

A Methodology for the Determination of the Case of Casting Defects and Their Removal; Creese, R. C.; p. 265.

1300 Quantitative methods

1304 Regression analysis

Fitting ROC Curves for Analysis of Industrial Inspection; Jaraiedi, M. and Herrin, G. D.; p. 488.

1305 Simulation/games

A Microcomputer-Based Cognitive Simulation Model for Preventive Maintenance Scheduling Under Inspection Policy; Ntuen, C. A.; p. 216.

Aggregate Industrial Capacity Expansion: A Multiple Criteria Approach; Lawrence, K. D., Lawrence, S.M., Gonzalez, J. J. and Reeves, G. R.; p. 414.

Animated Simulation Graphics for a Manufacturing Conveyor System; Barta, T. A. and Chu S. J.; p. 247.

Equipment Requirements Planning Using a Simulation Support System; Rolston, L. J.; p. 88.

Effect of Human Inspector Error on Sample Plan Design; Jaraiedi, M. and Herrin, G. D.; p. 436.

1306 Applied probability

Statistical Process Control—Management Issues; Zubairi, M. M.; p. 73.

The Use of Bayesian Statistics in Reliability Studies—Predicting USAF System Performance; Heising, C. D.; p. 494.

1400 Production and inventory control

1404 Materials Management

Materials Management Systems for Computer Integrated Manufacturing; Kurstedt, H. A., Jr., Jones, R. M., Reasor, R. J. and Peterson, J. L.; p. 154.

1405 Production control

Knowledge-Based Control of a Flexible Manufacturing System; Young, R. E. and Rossi, M.; p. 178.

Statistical Process Control—Management Issues; Zubairi, M. M.; p. 73.

1406 Production planning

An Analysis of Facility and Production Capacity; Ice, C. I.; p. 448.

Computer-Aided Production Standards Calculations; Banta, W. E.; p. 102.

Integration of CAPP and Computerized Standard Data; Caldeira, E.; p. 106.

Microcomputer-Based Process Planning Systems; Wang, H. P. and Wysk, R. A.; p. 145.

Scheduled Idle Time: A New Productivity Concept

For The Shop Floor; Findlay, D. O.; p. 95.

1407 Production scheduling

Group Scheduling Heuristics for Minimum Makespan in Multi-Stage Manufacturing Systems; Cho, K. K. and Ham, I; p. 130.

Maintenance Craft Scheduling System; Wilkens, R. H.; p. 392.

Management Issues In JIT and OPT Implementations; Leahy, J. A.; p. 82.

Scheduling Rules For Just-In-Time Policy In A Computer Integrated Manufacturing System; Okogbaa, O. G., Shell, R. L., Patel, M. and Damachi, N. A.; p. 137.

1500 Quality Control

"C.C. & Q.W.L." Up or On-The-Rocks?; Cubbin, S. M.; p. 28.

Improving Product Quality and Value—The Easy Way!; Bush, J. G.; p. 13.

1501 Inspection

A Methodology for the Determination of the Cause of Casting Defects and Their Removal; Creese, R. C.; 265.

Effect of Human Inspector Error on Sample Plan Design; Jaraiedi, M. and Herrin, G. D.; p. 436.

Fitting ROC Curves for Analysis of Industrial Inspection; Jaraiedi, M. and Herrin, G. D.; p. 488.

1502 Quality Control

An Integrated Approach to Productivity and Quality Improvement; Howell, M. T.; p. 506.

Hospital System Integration Through Productivity and Quality Control; Dieck, A. J. and Leonard, M. S.; p. 294.

Integrated Productivity Improvement—A Case Example; Jetton, B. R. and Barra, R. J.; p. 501.

The Design Of A Quality Assurance System For Hospital Pharmacies; Shell, R. L., Okogbaa, O. G. and Mimouni, C.; p. 268.

1503 Reliability

Reliability Centered Maintenance: An Industrial Engineering Approach to Preventive Maintenance; Seemer, R. H.; p. 522.

The Use of Bayesian Statistics in Reliability Studies—Predicting USAF System Performance; Heising, C. D.; p. 494.

1600 Work Measurement

1602 Computer aid

Cinematic Motion Modeling and Simulation on Micro-computer: An Economic Approach for Robot Time Perfomance Analysis; Dao, T. M.; p. 463.

Computer-Aided Production Standards Calculations; Banta, W. E.; p. 102.

1606 Standard data

Integration of CAPP and Computerized Standard Data; Caldeira, E.; p. 106.

1608 Standards development

Estimating Drafting Time; Johnson, L. R. and Fort, G. A.; p. 109.

1610 Work sampling

Work Sampling—An IIE Utility Industry Survey; Seemer, R. H., DeLuca, L. G. and McBean, G. A.; p. 514.

1611 General

Manpower Requirements Forecasting: A Case Example; Oberle, L. R. and Scott, P. M.; p. 526.

Work Measurement for the Transportation Supervisor; Downes, W. A. and Lutz, D. E.; p. 454.

1700 Data processing systems design

1704 Information retrieval

Applications of A General Purpose Information Management System; Frantzen, R. J.; p. 532.

In-House Development/Integration of Power Plant Data Acquisition System; Paul, R. L. and Sorge, J. M.; p. 540.

Information Retrieval Architectures for Expert System/DBMS Communication; Fisher, E. L.; Rasdorf, W. J. and Bhatt, R. V.; p. 315.

1705 General

A Multi-Modal Communication Strategy for Human-Computer Interaction; Fisher, E. L. and Joost, M. G.; p. 440.

A Relational Data Model For A Manufacturing Database; Taraman, S. R.; p. 195.
